

Warehouse Operations Standard Operating Procedure

Standard Operating Procedure for Inbound Receiving, Inspection, Storage & Discrepancy Handling

Document Title:	Warehouse Operations Standard Operating Procedure	Document ID:	SSE-WH-SOP-001
Version:	1.0	Status:	Approved
Effective Date:	2025-01-15	Review Date:	2026-01-15
Document Owner:	Logistics & Warehouse Operations	Approval Authority:	Head of Supply Chain Operations

1. Purpose

This Standard Operating Procedure (SOP) details the mandatory protocols for warehouse receiving, product verification, damaged goods quarantine, inventory bin put-away, and stock adjustments across all SupplySense Electronics distribution centers.

2. Scope

Applies to warehouse supervisors, receiving clerks, quality control inspectors, and inventory leads operating at WH-AHM-01, WH-MUM-01, WH-DEL-01, WH-BLR-01, and WH-HYD-01.

3. Goods Receiving Workflow

All inbound carrier shipments must strictly follow the 10-step receiving sequence:

Step #	Stage	Operational Description	Responsible Role
1	Shipment Arrival	Carrier gate check, dock assignment, physical seal verification.	Gate Security / Dock Clerk
2	Doc Verification	Verify Lorry Receipt (LR), Packing List, and PO Document.	Receiving Clerk
3	PO Verification	Validate active PO status in SupplySense system.	Receiving Clerk
4	Quantity Verification	Outer carton box count vs carrier consignment note.	Warehouse Operator
5	Product Verification	Unbox cartons, verify SKU, Brand, Model, and barcode labels.	Receiving Inspector
6	Quality Inspection	Inspect outer product packaging for moisture, crushing, or tampering.	QC Inspector
7	Serial Verification	Scan individual IMEI / Serial Numbers for Laptops, Phones, & Tablets.	Receiving Clerk
8	Goods Received Note	System entry of received quantities; generate Goods Received Note (GRN).	Warehouse Supervisor
9	Inventory Update	System automatically updates quantity_on_hand and available_quantity.	System / ERP
10	Storage Put-away	Move accepted inventory to assigned warehouse Bin storage locations.	Forklift / Put-away Team

4. Discrepancy & Damaged Goods Handling Protocol

4.1 Damaged Goods Protocol: Upon identifying physical damage, moisture exposure, or broken seals, the inspector must immediately (a) take high-resolution photographic evidence, (b) segregate items into the designated Warehouse Quarantine Bin, (c) mark item status as 'Damaged' in GRN, and (d) issue a Supplier Damage Notice within 24 hours.

4.2 Short Shipment: If delivered quantity is less than PO quantity, the receiving clerk logs actual received count on GRN. The PO remains in 'Partially Delivered' status.

4.3 Excess Shipment: If delivered quantity exceeds PO quantity, excess stock is held in Receiving Staging. Quantities exceeding PO by > 2% are rejected and sent back on carrier vehicle unless approved by Procurement Manager.

4.4 Wrong Product Delivered: Unordered SKUs are tagged 'Unidentified Stock' and placed in Quarantine. Notification is dispatched to Procurement immediately.

5. Bin Assignment & Stock Movements

5.1 Bin Strategy: High-velocity Fast Moving SKUs (e.g. Smartwatches, Earbuds) are assigned to Ground Floor Pick Bins near shipping bays. High-value SKUs (Laptops, Smartphones) are assigned to Secured Cage Bins.

5.2 Stock Transfer Protocol: Inter-warehouse transfers between WH-MUM-01 and WH-DEL-01 require a Stock Transfer Order (STO) and dual dispatch-receiving sign-off.

6. Cycle Counting & Inventory Accuracy

6.1 Perpetual Cycle Counting: Warehouses execute daily perpetual cycle counts covering 5% of active SKUs per day, ensuring 100% warehouse coverage monthly.

6.2 Adjustment Threshold: Physical count variances under ■5,000 are adjusted by Warehouse Manager. Variance above ■5,000 requires Internal Audit review.
